WILY TECHNOLOGY AND ADHOC PERFORMANCE ENGINEERING SOLUTIONS ANNOUNCE PARTNERSHIP TO DELIVER WILY'S LEADING JAVA APPLICATION MANAGEMENT SOLUTION

Brisbane, CA – December 17, 2003 – Wily Technology, the leader in Enterprise Java Application Management and adhoc Performance Engineering Solutions (PES) AG, a Switzerland-based competence center for performance engineering, today announced a partnership which enables adhoc PES AG to utilize Wily's solutions in services engagements, as well as resell Introscope, Wily's industry-leading solution for monitoring and managing Java applications.

Used by companies worldwide to monitor, manage and improve business-critical applications, Wily's Introscope offers a Whole Application™ view into the entire Java environment, allowing IT teams to identify performance problems whether inside the application itself, the application server, or in back-end transactional and supporting systems. Introscope's Blame™ technology isolates bottlenecks all the way down to individual Servlets, JSPs, EJBs, Classes, Methods and more. Wily's patented low-overhead agent technology gives IT staff the ability to manage live production applications and their operating environment 24x7.

"adhoc PES AG is an exceptional business partner and we are pleased they have joined us in advancing the industry's focus on maximizing the return on IT investments through monitoring and managing J2EE applications," said Stan Chin, vice president of channel operations at Wily Technology. "adhoc is dedicated to supporting its customers by helping them successfully deploy mission-critical applications that deliver superior quality of service, achieve fundamental business goals and offer a predictably superior user experience."

As an independent member of the adhoc Group based in Bensheim, Germany, adhoc PES is dedicated to application performance management and application performance monitoring. The company specializes in supporting organizations in developing and deploying complex software systems throughout the complete application life cycle. Through its partnership with Wily, adhoc will enhance its ability to help customers achieve high levels of Java application performance.

"We have deep synergies with Wily Technology's approach to managing production applications and we are excited about this partnership. In today's 24x7 environment, enterprises must recognize that application availability and performance issues can have a significant impact on their businesses," said adhoc Managing Director Makram Hanin. "Wily's best-of-breed application performance management solution offers enterprise IT organizations a tremendous advantage and is exactly what our customers need to manage complex and frequently changing J2EE applications. The opportunity to offer Introscope increases the value we deliver to our customers so that they can fulfill their business and technical needs."

The partnership with adhoc PES AG is part of Wily's growing ecosystem of partnerships. Through its partner programs, Wily teams with industry-leaders in Java™2 Enterprise Edition (J2EE) application management, development, deployment and operation who are helping to define the eBusiness infrastructure landscape and who are creating high-performance, mission-critical enterprise solutions for their clients. By working together, Wily and its partners make it easier for joint customers to ensure that their Java application projects meet the very highest standards for performance and availability.

About Wily Technology, Inc.

Wily Technology has become the leader in enterprise Java application management by helping its customers keep their applications running at peak performance. Wily's comprehensive solution gives customers visibility into their new-generation Java applications; integrates into existing IT systems management processes; and when combined with Wily's best practices, helps enterprise IT personnel become world-class managers of Java applications. Wily's patented Introscope[®] software monitors large-scale Java applications in real-time production environments, isolating bottlenecks and minimizing downtime. Wily has established strategic partnerships with industry leaders such as BEA Systems, Fujitsu, Hewlett-Packard, IBM, Oracle, and Sun Microsystems. Based on the strength of its innovation, partnerships, and solid customer base, Gartner, Inc. recently placed Wily in the leader quadrant in the J2EE Application Server Management Magic Quadrant.
